We began the logging operation on 4-1-2013. Here you see a photo of the logger getting started.

With the logging operation wrapping up 4-6-2013, Henderson Inc manpower and equipment is now onsite full time. We began to pluck stumps and root rake. Here you see an excavator working the root material into piles which we will begin burning later this week.

Here you see two excavators working the perimeter of the site first. These areas must me grubbed first for the installation of silt fence.

This week we also began installing silt fence right behind the clearing crew. Here you see freshly installed silt fence along the south east edge of the project.
